

Transmission of Huygens' Surface

Yankun (Alex) Meng

Important Questions to answer:

- Why do we need a normalizing run? (FDTD 101)
- Why is there a mismatch between `td.FreqRange.wvl0` and `td.C_0 / td.FreqRange.freq0`

Huygens' Metasurface Paper Link

```
1 import matplotlib.pyplot as plt
2 import numpy as np
3 import tidy3d as td
4 import tidy3d.web as web
```

Preconditions

```
1 # 0 Define a FreqRange object with desired wavelengths
2 fr = td.FreqRange.from_wvl_interval(wvl_min=1.1, wvl_max=1.6)
3 N = 301 # num_points
```

```
1 # 1 Computational domain size
2 h = 0.220 # Height of cylinder
3 spc = 2
4 Lz = spc + h + h + spc
5
6 Px = Py = P = 0.666 # periodicity
7 sim_size = [Px, Py, Lz]
```

```
1 # 2 Grid Specifications
2 dl = P / 32
3 horizontal_grid = td.UniformGrid(dl=dl)
4 vertical_grid = td.AutoGrid(min_steps_per_wvl=32)
5 grid_spec=td.GridSpec(
6     grid_x=horizontal_grid,
7     grid_y=horizontal_grid,
8     grid_z=vertical_grid,
9 )
```

```
1 # 3 Structures
2 r = 0.242 # radius of the cylinder
3 n_Si = 3.5
4 Si = td.Medium(permittivity=n_Si**2, name='Si')
5 cylinder = td.Structure(
```

Simulation

```
1 sim_empty=td.Simulation(  
2     size=sim_size,  
3     grid_spec=grid_spec,  
4     structures=[substrate, glass],  
5     sources=[source],  
6     monitors=[monitor],  
7     run_time=run_time,  
8     boundary_spec=bc  
9 )
```

```
1 sim_actual = td.Simulation(  
2     size=sim_size,  
3     grid_spec=grid_spec,  
4     structures=[substrate, glass, cylinder],  
5     sources=[source],  
6     monitors=[monitor],  
7     run_time=run_time,  
8     boundary_spec=bc  
9 )
```

```
1 fig, (ax1,ax2,ax3) = plt.subplots(1, 3, figsize=(10, 6))  
2 sim_actual.plot_eps(x=0, ax=ax1)  
3 sim_actual.plot_eps(y=0, ax=ax2)  
4 sim_actual.plot_eps(z=0, ax=ax3)
```

Postprocess

- 35 seconds to run both simulations
- results are stored inside `batch_data`

```
1 T = batch_data["actual"]["flux"].flux / batch_data["norm"]["flux"].flux
```

```
1 # plot transmission, compare to paper results, look similar  
2 fig, ax = plt.subplots(1, 1, figsize=(6, 4.5))  
3 plt.plot(fr.freqs(N), T, "r", label="T")  
4 plt.xlabel(r"Frequency ($Hz$)")  
5 plt.ylabel("Magnitude")  
6 plt.ylim(0, 1)  
7 plt.legend()  
8 plt.show()
```
